SECTION A

INTRODUCTION TO OPENTYPE®

WHAT IS OPENTYPE?

OpenType® is a cross-platform font file format developed jointly by Adobe and Microsoft. The two main benefits of the OpenType format are its cross-platform compatibility (the same font file works on Macintosh and Windows computers), and its ability to support widely expanded character sets and layout features, which provide rich linguistic support and advanced typographic control.

OpenType fonts can be installed and used alongside PostScript® Type 1 and TrueType fonts.

The range of supported layout features may differ in the various FontFont OpenType packages, therefore each OpenType package will be accompanied by this FF Info Guide listing the layout features supported by this specific font package.

You'll find a glossary of all available OpenType layout features in Section B of the general FF OpenType User Guide.

ABOUT FF ALEGA BOLD ITALIC

Siegfried Rückel says: My intention was to create a face with a technical look that was still very readable and suitable for headlines as well as body text. While working on several fun faces I suddenly discovered a form which seemed to be a good basis for a new font. This form appears in all Alega fonts, especially in the letters b, d, p, q and h, m, n and u as well as in most of the stroke endings and character curves. It was a challenge to find new forms for several characters, for example the capital X looks like a prehistoric cave painting or primitive African art. I also transferred the Antiqua lower case g into a technoid form. I tested legibility using texts from pharmaceutical products which you really must read character by character because you wouldn't recognize the words with just a cursory glance at the text.

The family contains true italics with emphasis on the handwritten character as you can see in the long descender of the italic f. The widths of the upper case letters correspond to the lower case letters which gives the face a homogenous look and emphasizes its technical character. This means that the small caps have the same optical width as the upper case letters. In the OT CFF versions with layout features you will find alternative commercial ats (@), an old form of the German double s, 15 f and t ligatures and several different arrows. I think you can use FF Alega for headlines, as a corporate typeface or text face, as well as for pop magazines, business journals and anthroposophic typography.

When I originally designed FF Alega I did not consider a serif version. But following the release of FF Alega, I experimented with serifs and decided the effort was worthwhile. FF Alega Serif has a technical look, but is very readable. It combines well with the original sans serif face.

ABOUT SIEGFRIED RÜCKEL

Siegfried Rückel lives in Berlin and works as a freelance designer. He studied design at the University of Applied Science in Potsdam under Lucas de Groot and Lex Drewinski. After releasing a number of “fun” faces he started his first earnest type project to create a modern typeface with a

technical look. The intention: combining Antiqua qualities with technical appearance. The name: FF Alega.
